

MULESOURCE

The open source choice for SOA infrastructure

OVERVIEW

MuleSource is the leading provider of open source service oriented architecture (SOA) infrastructure software. Founded by the creators of the Mule project, the world's most reliable and widely used open source enterprise service bus (ESB) and integration platform, MuleSource delivers enterprise-class software, support, and services to the thousands of organizations that have downloaded the open source project worldwide.

MULESOURCE PRODUCTS

Mule ESB

Designed to support high-performance, multi-protocol transactions between heterogeneous systems and services, Mule provides the basis for SOA.

Mule Galaxy

SOA governance platform with registry and repository: gives your organization a single source of truth for the governance and management of your SOA.

Mule Saturn

Data-level monitoring: designed to complement your SOA infrastructure by providing detailed logging and reporting on every transaction that flows through the Mule ESB.

Mule HQ

Centralized way to manage not only all of an enterprise's Mule deployments, but also all of the disparate systems and services that comprise the SOA infrastructure.

HISTORY

The open source Mule project was founded in 2003 by Ross Mason, CTO of MuleSource Inc. Frustrated by integration "donkey work" Ross set out to create a new platform that emphasized ease of development and re-use of components. He started the Mule project to bring a modern approach, one of assembly, rather than repetitive coding, to developers worldwide.

AT A GLANCE

Headquarters:
San Francisco, CA

Funding:
\$16m: Hummer Winblad,
Lightspeed Ventures,
Morgenthaler Ventures

Employees:
50 (9 countries)

Downloads:
1M and counting

Production Users:
2,000 (including 8 of the
Fortune 50)

Sector:
Open source service
oriented architecture (SOA)
infrastructure

MULESOURCE SUBSCRIPTIONS AND SERVICES:

MuleSource provides a comprehensive set of enterprise-class software, support, and services directly from the developers of the Mule project. For a single annual fee, a MuleSource subscription offers a unique combination of technical support, sophisticated management tools, and reduced total cost of ownership (TCO), making it a must-have for enterprise level deployments and mission-critical applications.

SUPPORT

Troubleshooting and advice from the experts

ENTERPRISE-CLASS SOFTWARE

Built and tested for enterprise deployments

TOOLS

Tools for monitoring, management, availability, and performance

VALUE

Lower total cost of ownership

On top of subscriptions, MuleSource architecture services help developers go from download to deployment. Mule developers are typically up and running with Mule in just five minutes.

ABOUT MULESOURCE

MuleSource is the leading provider of open source service oriented architecture (SOA) infrastructure software. Founded by the creators of the Mule project, the world's most reliable and widely used open source enterprise service bus (ESB) and integration platform, MuleSource delivers enterprise-class software, support and services to the thousands of organizations that have downloaded the open source project worldwide. Founded in 2006 and backed by investors Hummer Winblad Venture Partners, Lightspeed Venture Partners and Morgenthaler Ventures, MuleSource is headquartered in San Francisco with offices worldwide.

WHY MULESOURCE

- ▶ Standards based open source software
- ▶ Expert support and services from the company behind the technology
- ▶ Flexible adoption and implementation model
- ▶ Freedom from exorbitant proprietary licensing fees

“Interest in open source SOA infrastructure is growing rapidly because of the increasing use of SOA in general, the spread of proprietary ESBs, and the low cost of open source ESBs, which have the potential to reduce software costs and enhance vendor independence, especially where other open source components are used.”

**Roy Schulte, VP and Distinguished Analyst
Gartner**
